T-1600 Non Magnetic Roll Fixture

Strap to hold fixture

Level Vial for control of TDC

T-1600 Fixture
T-1600 Non Magnetic Roll Fixture with T-1601 Tight Space Bar

Note: To take roll alignment readings with 2 targets, you must zero both targets at a point closest to the laser and then for each measurement, you must average the 2 target readings. This makes the readings very insensitive to the T-1600 being on Top Dead Center (TDC) or not. The level vial helps keep the T-1600 at TDC when used without the T-1601.
